

# DEMOCRATIA AQUA TECHNICA

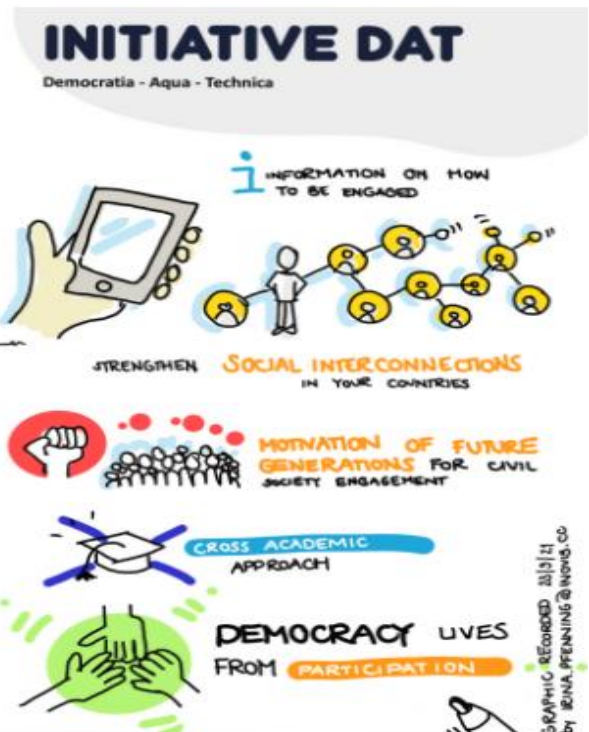

Democratia focusing on development of innovative technical solutions for sustainable water resource management. Under this series of project-based event are conducted. The focus of event will on create ideas, concepts and solutions towards sustainable water resource management and will be present during online conference. Democratia 2022 planned four events which will intensify the exchange of knowledge between partner university and networks.

Democratia Aqua Technica conduct several project-based events to studies on:

- River depollution in urban design,
- Micropollutants / water quality / Artificial Intelligence, and
- Water re-use / resource recovery.

These events will focus on the creation of ideas, concepts, entertaining approaches and or solutions to be presented as challenges within 24 hours in a bid to find innovative technical solutions towards sustainable water resources management using cross-academics approaches.

The ideas and concepts generated during the Democratia–Aqua–Technica to be presented during an online conference will contribute innovative solutions for sustainable water resource management with the aim of promoting the reduction of regional and local conflicts vis-à-vis water use.
